INTEGRATED (MTECH COMPUTATIONAL AND DATA SCIENCE)

INTRODUCTION

This project focuses on digital literacy and its vital role for students in the modern digital era. Its objective was to grasp digital tools, maintain a professional online identity, handle online interactions, and prioritize cyber safety. For students, mastering the proper and secure use of digital platforms is essential. In this project, I tackled five key tasks: designing a digital literacy infographic, developing a digital portfolio, investigating coding and collaboration tools, drafting professional emails, and learning about cybercrime prevention. Completing it boosted my digital skills and highlighted the need for responsible internet and platform usage.

Task-1 INFOGRAPHICS

In Task 1, I designed a Digital Literacy Awareness infographic using Canva. The infographic covered key

areas such as what digital literacy means, safe internet habits, helpful digital tools for students, and basic email etiquette. Its main aim was to create awareness among students about using digital technology wisely and responsibly. While working on this task, I learned how to use Canva to turn information into clear, well-organized visuals. I enjoyed choosing suitable icons, colours, and layouts to make the design both attractive and easy to understand. One challenge I faced was deciding on the right style and arranging the content in a logical flow, but overcoming this improved my design thinking. Overall, this task helped me realize how important visual communication is in sharing knowledge effectively.

Task-2 Digital Portfolio

In Task 2, I built my digital portfolio by creating professional profiles on GitHub, LinkedIn, and Kaggle. GitHub is a platform where I can share my coding

projects and maintain a record of my learning journey in programming. LinkedIn is a networking site that allows me to connect with teachers, peers, and industry professionals, which will support me in finding internships and job opportunities later on. Kaggle is a platform focused on data science and coding practice, where I can improve my problem-solving skills. In the coming four years, I intend to regularly add my projects and code to GitHub, keep my LinkedIn profile current with new skills and accomplishments, and continue practicing coding challenges on Kaggle. This task helped me realize how valuable a strong, professional online presence is for a student and how these platforms can contribute to long-term career development.

Task-3 Coding & Collaboration Platforms

In Task 3, I explored various coding and collaboration platforms to understand how they support learning and teamwork. I made an account on HackerRank and attempted a beginner-level programming problem, which

gave me hands-on experience with how coding platforms organize challenges and track progress. This helped me see how regular practice on such sites can gradually improve my programming skills. I also created a Google Form named “Digital Literacy Awareness Quiz” and designed five multiple-choice questions focused on digital literacy and safe internet use. After sharing the form, I collected responses that were automatically saved in Google Sheets. Through this task, I learned how to set up online forms, gather responses, and use spreadsheets to view and analyze the data. These tools will be useful for my academic work, especially for conducting surveys, quizzes, and other types of data collection.

Task-4 Email Etiquette

In Task 4, I focused on learning professional email writing and understanding the basics of email etiquette. I drafted one email to a professor requesting an extension for an assignment deadline and another email to a company to inquire about internship opportunities.

Through this, I realized that a professional email should include a clear and specific subject line, a formal greeting, courteous and concise language, and an appropriate closing. I also prepared a social media “do’s and don’ts” checklist to encourage students to use social platforms in a responsible and respectful manner. This task helped me recognize the value of professional communication in academic and career settings, as well as the importance of maintaining positive and responsible behaviour online.

Task-5 Cybercrime Awareness

In Task 5, I explored the topic of cybercrime, with a special focus on UPI fraud, which is widely reported in India. I learned how criminals often pretend to be bank employees or customer support agents and try to collect sensitive information like OTPs or UPI PINs. Many individuals end up losing money because they are

unaware of these tactics and trust the fake callers. While studying this, I was shocked to see how quickly people can fall prey to such online scams. After completing this task, I have decided to stay more alert during online transactions and to never share my OTP or UPI PIN with anyone. This task helped me understand the importance of cyber safety and the need for constant awareness when using digital payment systems.

CONCLUSION

This Digital Literacy project was highly beneficial and eye-opening for me. I gained knowledge about digital literacy, various online tools, professional communication, and the importance of cyber safety. I also learned practical skills such as creating a GitHub repository, designing a Google Form, and building professional profiles on key platforms. These skills will

support me in both my academic work and future career. Overall, this project helped me become more aware, responsible, and confident in using digital technology in a safe and effective way.
